- The successful candidate will have to take part in customer site visits/assessments
- The successful candidate will have perform on-site measurement campaigns using the group's specialist Radar test equipment.
- The successful candidate will be responsible for generation and conduct of verification, validation and acceptance test documentation.

PROFILE

- Master degree in Engineering or Industrial Sciences (electronics) or equal by experience
- At least 4 years of experience in an integration and test role
- Knowledge of Radar technologies and operation is advantageous but not essential
- Experience of working in a Radar or communications environment
- Good knowledge of analog and digital electronics, communication networks, virtual instrumentation
- Knowledge of PLC systems, Software languages, Linux
- Good organizational skills to assure on time delivery of quality critical projects
- Can work independently and in group and are capable of taking the lead in on-site installations and measurement campaigns
- You are a problem solver
- You have good communication skills and can provide good customer relations and customer management
- Good knowledge of English, knowledge of other languages can be an advantage
- You are looking for a challenging job

- Willingness to travel worldwide (between 5 and 25% depending on ongoing projects)

OUR OFFER

You will join our company working in a high-tech engineering, test, and production environment and fulfil a critical role in assuring the quality of our manufactured products. Depending on your skills, expertise, flexibility, and ambitions, you will get the opportunity to help grow the company.

Your salary will be competitive and evolve according to your experience, commitment and results.

Please send your CV and a letter of motivation to jobs@radar-solutions.be
